From: Butch Visser; Building Official

Re: Health Department Approval of additions.

The Kent County Health Department has informed me that in the future it will be necessary to get Health Department approval before we can issue Building Permits for additions to existing homes that are using septic systems for waste disposal.

This will include finishing off additional bedrooms in the basement or attic spaces that were not shown on the original drawings.

They will also be reviewing plans for garage and pole barn additions to determine how they affect the existing and reserve fields.

Please present your plans to them and obtain written authorization before making application with us.
